

These are just a few of the many products that come from trees!

Trees are a natural supply of chemicals that are important ingredients in plastic filler, varnishes, toothpaste, shoe polish, foam rubber and much, much more.

Wood pulp makes paper products such as napkins, books, magazines, envelopes, paper cups, food packaging, and many other items.

Trees produce cellulose, which is the smooth part of ice cream, salad dressing, chewing gum and toothpaste.

Tree fibers are found in rayon and other fabrics.
